To our customers and friends:

When Winter comes, can Spring be far behind?

We offer in this Price List the highest quality of Farm Seeds that can be obtained and varieties that are adapted to our Northeastern farms.

The Policy of Our Company is Plain and Simple — to furnish Farm Seeds that we are proud to sow ourselves.

We can ship all seeds except potatoes at once or as you may direct, and can hold potatoes until weather conditions are favorable, or we will book your order to be called for at our warehouse.

Come see us or order by mail. No order is too small.
Remember — Farm Seeds For Farm Needs in 1962.

Sincerely yours,

EDWARD F. DIBBLE SEEDGROWER

Harwood Martin
Harwood Martin, President

Conditions of Sale

We assume responsibility that the seeds or tubers reach the purchaser in good condition. We offer to refund the purchase price of any seeds or tubers found by tests to be unsatisfactory to you within ten days after the seeds or tubers reach you. In common with all responsible seedsmen "The Edward F. Dibble Seedgrowing company warrants to the extent of the purchase price that seeds or tubers sold are as described on the containers within recognized tolerances. Seller gives no other or further warranty express or implied."

DIBBLE'S RUSSET POTATO

ALFALFA SEED

CAYUGA

CAYUGA is a new alfalfa variety developed at Cornell. It was evolved to fit the need for a high yielding, fast growing variety similar to DuPuits, but with a longer productive life.

In Cornell trials, Cayuga has produced very high yields under intensive management (three harvests per year) on fertile, well-drained soils that are well suited to alfalfa. Cayuga's recovery growth rate is intermediate between varieties like DuPuits and Ranger or Narragansett.

Under favorable alfalfa growing conditions, Cayuga has yielded about one-half ton per acre less than DuPuits in the first year, has been equal to it in the second harvest year, and markedly superior in the third and fourth years. Supplies are limited.

NARRAGANSETT

NARRAGANSETT, with its ability to produce a high forage yield on problem soils, is the workhorse variety for New York. It does well on all alfalfa sites, but is markedly superior where drainage problems cut production and stand life. Narragansett, combined with Viking trefoil and Climax timothy, has become the standard mixture where drainage conditions are spotty.

VERNAL

VERNAL is a high yielding bacterial-wilt resistant variety, well suited to long-lived stands. Vernal does well under most growing conditions. It is best suited to well-drained soils where a long-lived stand under two and sometimes three cutting management is desired.

DU PUITS

DU PUITS ALFALFA is of French origin and the highest yielding variety on the fertile soils of the Northeast for stands up to three years. Du Puits starts growth earlier in the spring, recovers faster and continues growth later in the fall than other recommended varieties. On three cuttings (starting late May or early June) over five tons per acre may be expected. Successful stands of Du Puits have been established on soils of moderate drainage.

RANGER

RANGER ALFALFA, a long-lived Alfalfa, is highly resistant to bacterial wilt. It is winter hardy and is therefore well suited to our Northeastern conditions where a long-lived stand is desired.

DIBBLE'S *Seed Oats*

HIGH YIELDING VARIETIES FOR THE NORTHEAST

ONEIDA — Disease-Resistant Variety

Oneida is a new high-yielding mid-season spring oat for the Northeast, released by Cornell after extensive trials. It was designed to give greater protection against black stem disease which has been responsible for severe stem break and lodging in other varieties.

DESIRABLE FEATURES OF ONEIDA OATS

1. Very stiff straw.
2. Medium height.
3. Medium early.
4. Marked tolerance to black stem.
5. High resistance to crown and stem rust.
6. Almost complete resistance to loose smut.

DIBBLE'S GARRY

The Garry Oat originates from the Dominion Laboratories at Winnipeg, Canada and this is the seventh year that seed has been available to our Northeast farmers. It is the predominant variety grown in New York State and continues to be an outstanding variety where black stem is not a factor. It is hard to beat for yielding ability.

The Garry Oat has exceptional stooling ability and maximum yields may be obtained by planting 2 bushels per acre.

DIBBLE'S RODNEY

Rodney, a Canadian-bred oat has proven to be a very desirable Oat for our Northeast territory. Rodney yields about the same as the Garry and has about the same height and stiffness of straw. It is five days later than Garry and has a very hard kernel. This makes it very desirable for crimping. Sow 2 to 2½ bushels per acre.

Maturity Guide

FOR DIBBLE'S SEED CORN

EARLY

100 days

Michigan 250

Mainly for grain production in New York State above elevations of 600 feet and early to medium seasons of the Northeast. Excellent for early silage producers.

MEDIUM

110 to 115 days

Cornell M-3 (Outstanding New Variety)
Cornell M-4
Cornell M-10
Penn. 444

For grain in the good growing sections of western New York State and similar seasons of the Northeast. Excellent yields for silage at elevations around 800 feet in New York State and similar seasons of the Northeast.

MEDIUM LATE

115 to 125 days

Ohio K-62
Ohio K-24

Extremely heavy silage producers for the good Corn-growing dairy sections in New York State and the Northeast. For grain in the best Corn-growing sections of the Lower Hudson, Long Island, Pennsylvania, New Jersey and Connecticut.

LATE

130 days

West Branch Sweepstakes
Lancaster County Sure Crop

Open-pollinated varieties that produce high yields of silage in the best growing sections of the Northeast.

1962 SEEDINGS FOR HAY, SILAGE, AND PASTURE

Use only certified seed. Seldom should a farmer use only one variety. For high yields, choose the variety that best suits the mixture, the soil conditions, and the intended management and use for each field.

This is the best choice for high yields and early harvest on fertile, well drained soils.

DuPuits or Cayuga alfalfa, 8 lbs. Orchard grass, 6 lbs. or Saratoga bromegrass, 8 lbs. or Climax timothy, 6 lbs.

FIRST HARVEST DATE - Late May to early June.

ADDITIONAL HARVESTS - 2 to 3.

LENGTH OF STAND - 1 to 4 yrs.

Higher yielding than either alfalfa or trefoil alone on fields with spotty drainage patterns if soil pH is favorable for alfalfa.

Narragansett or Vernal alfalfa, 4 lbs. Viking early birdsfoot trefoil, 4 lbs. Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 2 to 5 yrs.

Excellent for long-term hay or pasture on fields too wet for alfalfa. Rotation grazing is essential for longer stand life.

Viking early birdsfoot trefoil, 5 to 8 lbs. Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 3 or more yrs.

A sound choice for longer-lived stands where very early first cutting is not possible or on soils with marginal drainage.

Narragansett or Vernal alfalfa, 8 lbs. Saratoga bromegrass, 8 lbs. or Climax timothy, 6 lbs.

FIRST HARVEST DATE - Early to Mid-June.

ADDITIONAL HARVESTS - 1 to 2.

LENGTH OF STAND - 2 to 5 yrs.

Superior to alfalfa if either fertility, soil pH, soil drainage condition, or forage establishment are unfavorable for alfalfa.

Dollard or Pennscoth red clover, 6 lbs. Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 1 year.

Empire is about two weeks later than alfalfa or early birdsfoot trefoil. Essex timothy is one week later than Climax.

Empire late birdsfoot trefoil 5 to 8 lbs. Essex or Climax timothy, 6 lbs.

FIRST HARVEST DATE - late June to early July.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - Semi Permanent.
